# How does the consortium work?

# Building on post conflict momentum

Health systems research has tended to neglect post-conflict settings.

There are particular opportunities to set health systems in a pro-poor, gender equitable direction in the immediate post-conflict period.

# Project background and networks

**ReBUILD** focuses on health financing and human resources to identify opportunities that arise during the recovery from conflict.

**SIPRI Gender Working Group** focuses on how health reconstruction in post conflict settings integrates or responds to gender equity issues.

# Case study approach

---

- We conducted two in-depth case studies of health sector post-conflict reconstruction in Northern Uganda and Timor-Leste from a gender perspective
  - We triangulated these findings with a brief analysis of further cases studies of Sierra Leone and Mozambique
- We also conducted a gender analysis of five Consolidated Appeals (CAPs) in Cote d'Ivoire, Haiti, Liberia, Somalia, and South Sudan
  - This provided a brief snapshot of the priorities of the humanitarian community for a given emergency, particularly how gender is integrated into the analysis, and reflected in the programming priorities.

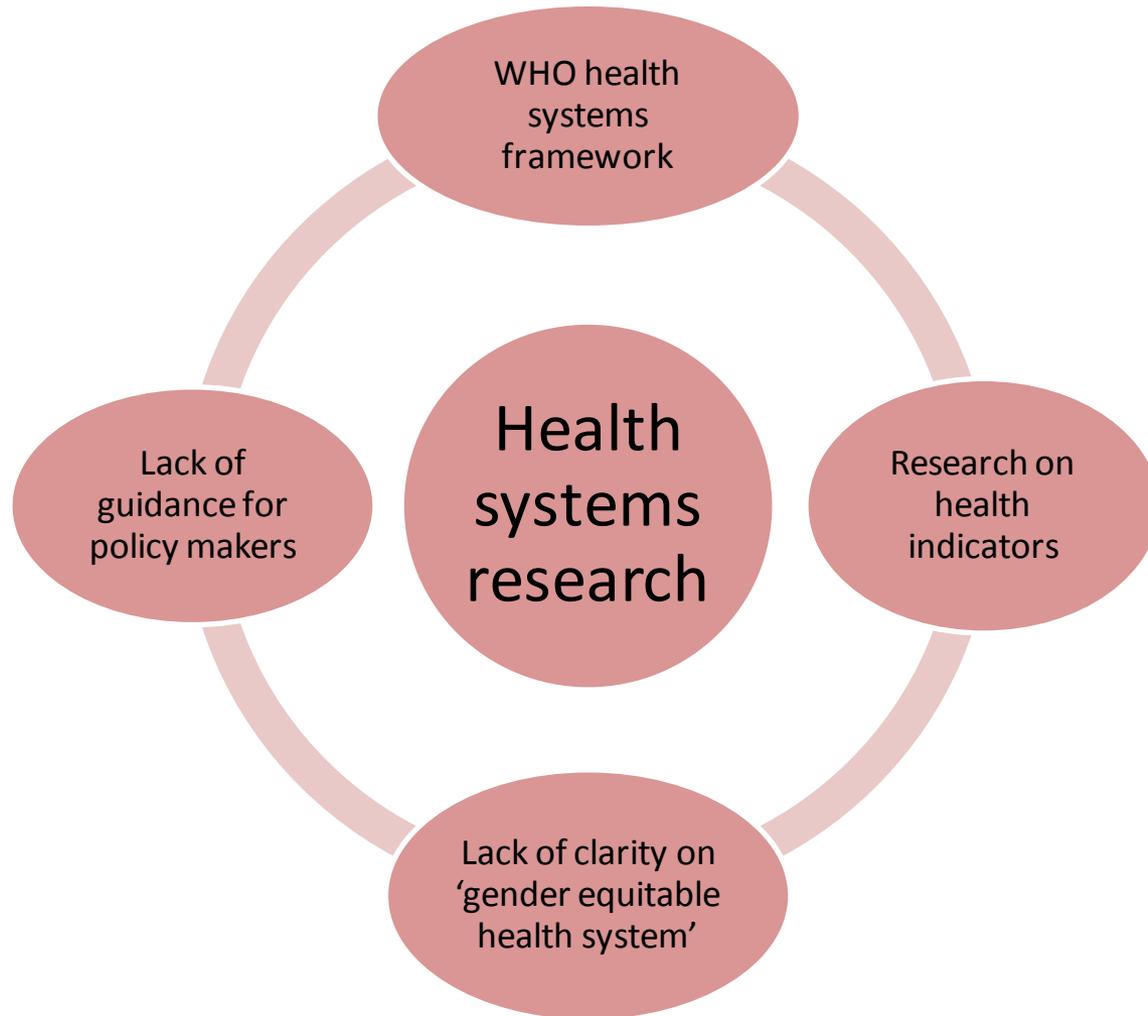

# Opportunities and challenges for gender equity in the post-conflict moment

**UNSCR 1325**

**Focus on sexual violence and maternal health**

**Opportunities missed for broader application of gender equity in reconstruction**

# Opportunities and challenges for gender equity in the post-conflict moment

# Conclusion

- Learning from country cases can provide valuable insight into the opportunities and challenges for gender mainstreaming in post-conflict reconstruction of health systems.
- There is a need to move beyond broad-defined indicators on maternal mortality and SGBV to develop better understanding of the interaction of various health system elements from a gender perspective.
- Work on gender equity in post-conflict settings needs to include a focus on different groups of women and men, especially to better combat and prevent SGBV.

**Next steps:** currently working on a review of gender indicators with a long-term view of developing guidelines for integrating gender-responsive indicators as part of health reforms in fragile and conflict-affected settings.

# Acknowledgements

---

- Val Percival, NPSIA/Carleton, coordinator, analysis/integration of research;
- Tammy Maclean, LSHTM, Literature Review;
- Esther Richards, ReBUILD, LSTM, Timor-Leste case;
- Justine Namakula, ReBUILD, Makerere University, Northern Uganda case;
- Sarah Ssali, ReBUILD, Makerere University, Northern Uganda case;
- Francelina Romão, Mozambique Ministry of Health, Mozambique case;
- College of Medicine and Allied Health Sciences, ReBUILD, Sierra Leone case.
